

Pressure Reducing Valves

The Singer models 106-PR / 206-PR Pressure Reducing Valves sense the downstream pressure through a connection at the valve outlet. Under flowing conditions, the pilot reacts to small changes in pressure to maintain a steady downstream pressure.

TECHNICAL GUIDE: **AVH1.8**

Applications

Potable water

Municipal

Mining Applications

Irrigation Applications

Water loss management

Product Attributes

Ideal for maintaining accurate downstream pressure

Responds quickly and effectively

Approvals/Standards

AS 5081:2008

Flanges to AS/NZS 4087 Fig. B5

Coating complies with AS/NZS 4158

Licence Number:
WMK/SMK26726

The Singer Pressure Reducing Valves are based on the 106-PG or 206-PG main valves and are configurable to suit your application.

The pilot valves sense the downstream pressure through a connection at the valve outlet. Under flowing conditions, the pilot reacts to small changes in pressure to control the valve position by modulating the pressure above the diaphragm. The downstream pressure is maintained virtually steady at the pilot set-point.

In typical pressure reducing applications, the reduced port model 206-PR is often the best selection.

STANDARD MATERIALS

Standard materials for pilot system components are:

- ASTM B62 bronze or ASTM B16 brass
- AISI 303 / 316 stainless steel trim
- Buna-N / EPDM diaphragm and seals

ORDERING INSTRUCTIONS

Refer to the order form and ordering instructions.

Additionally, include the following information for this product:

1. Single chamber (106) or (206)
2. Outlet pressure range

SELECTION SUMMARY

1. Select the valve series and size with sufficient capacity
2. Check the operating flow against valve minimum.
3. If the outlet pressure is less than 35% of the inlet pressure, check for cavitation.
4. Ensure that the flange rating exceeds the maximum operating pressure.

Refer to the Singer Control Valve Sizing Calculator on our website for assistance.

Note:

- The smaller PR valve by-passing the main valve helps control low flows and provides service during maintenance. It should be set 0.2 – 0.35 bar higher than the larger valve setting.
- Singer Valve single rolling diaphragm technology 150 mm and larger have extremely precise control, even at low flows, making smaller by-pass valves unnecessary except for possible bypass during maintenance.

FIG. 1 Typical application

SCHEMATIC DRAWING

1. Main Valve - 106-PG or 206-PG
2. Isolation Valve - standard 100 mm and larger
3. Strainer - standard 100 mm and larger
4. Model 26 Flow Stabilizer / Opening Speed Control
 - Standard on valves 200mm 106, 250mm 206 and smaller
5. Fixed Restriction
6. Isolation Valve - standard 100 mm and larger
7. Model 160 pilot. Specify for:
 - 0.35 to 3.5 Bar
 - 0.70 to 5.5 Bar
 - 1.38 to 13.8 Bar
 - 6.9 to 20.7 Bar
8. Isolation Valve - standard all sizes

Note: Singer Rolling Diaphragm shown is available for 150mm 106-PG and larger.
